ABOUT ME

Full-Stack Developer focused on building modern web applications and digital products. Experienced with JavaScript, TypeScript, React, Next.js, Node.js, REST APIs, databases, and Git. I enjoy building responsive frontend interfaces, backend services, API integrations, and automation tools. Also interested in AI-powered applications and integrating AI APIs into real-world products. Looking for a Full-Stack or Frontend Developer position where I can grow my skills and contribute to useful products.

EDUCATION

School No 7 High School Diploma • Leave blank
General Education Namangan Uzbekistan • 2015–2026
Completed secondary education with a strong interest in programming and information technology.

International School of Finance Technology and Bachelor's Degree • Leave blank
omputer Science / Information Technology Tashkent Uzbekistan • 2026–2030
Studying computer science and developing skills in programming, web development, databases, and software engineering

EXPERIENCE

TechDataSoft Namangan Uzbekistan
Full-Stack Developer 2024–2026
A technology company focused on developing web applications, digital solutions, and software products for businesses.

PROJECTS

PowerMap 2025
A nationwide monitoring platform designed for the oversight of electrical infrastructure across Uzbekistan, including substations, power lines, and distribution units. The system provides real-time visibility into equipment locations, operational status, and technical metrics. Authorized personnel can track performance indicators, review maintenance histories, and detect critical issues through an interactive digital map. The platform strengthens coordination between regional energy services, improves response times, and supports data-driven decision-making for stable and efficient power distribution.

WaterMap 2025
A nationwide monitoring platform designed for the oversight of water infrastructure across Uzbekistan, including water stations, water lines, and distribution units. The system provides real-time visibility into equipment locations, operational status,

and technical metrics. Authorized personnel can track performance indicators, review maintenance histories, and detect critical issues through an interactive digital map. The platform strengthens coordination between regional water services, improves response times, and supports data-driven decision-making for stable and efficient water distribution.

Beaty Point 2025

Beauty Pint is a modern web platform for showcasing beauty products, including skincare, makeup, and personal care items. It features a clean UI, responsive design, and smooth navigation, allowing users to explore products easily and efficiently. The project highlights strong frontend development skills, with a focus on performance, usability, and scalable interface design.
